QUALITY CONTROL SEGMENT

The next image which appears in this sequence is a special **Reflectance Target** which is employed to measure the density or contrast of microfilmed images. The target is a six-inch square which has been centered on an 8.5 x 11 inch sheet of bond paper. It is included as a part of this roll of film as a control measure to verify adherence to NMA and MILSPEC density standards.

The reflectance target is followed by a **Resolution Target** (ANSI Microcopying ISO Test Chart Number 2) which is designed to determine the resolving power of a given camera, film, and developing combination. Both the reflectance target and resolution target are included in this roll of film to provide a constant for quality control purposes since all images on the roll have been filmed and processed under identical conditions. The specific numerical values related to these measurements, for this roll of film, are provided on the quality control check sheet which accompanies each roll of film.

The user may note a variation in both density and resolution among the remaining images contained on this roll of film. This is caused by a variance in the reflectance qualities of the individual documents as well as the sharpness or clarity of the printed or written material. In filming these documents, both exposure and processing factors were selected which would provide the best possible reading and reproduction qualities for the range of documents which were filmed, while remaining within the allowable spectrum of NMA and MILSPEC standards.

While the user may not possess the special equipment necessary to verify precise numerical values, these targets and this printed page provide a satisfactory means for a non-technical evaluation of both contrast and clarity. The user should be able to see a clear, sharp image, with a good contrast in black and white. This image should also provide a means of calibrating the focus mechanism of the projector, reader, or other viewing device.

For information purposes, this printed text (less heading & address information) is 12 point Bitstream Charter type, printed on standard 20-pound paper.
